ADDITIONAL INFORMATION

Related Product Information for anti-GABPB1 antibody	This gene encodes the GA-binding protein transcription factor, beta subunit. This protein forms a tetrameric complex with the alpha subunit, and stimulates transcription of target genes. The encoded protein may be involved in activation of cytochrome oxidase expression and nuclear control of mitochondrial function. The crystal structure of a similar protein in mouse has been resolved as a ternary protein complex. Multiple transcript variants encoding distinct isoforms have been identified for this gene.
Product Categories/Family for anti-GABPB1 antibody	Cancer; Epigenetics and Nuclear Signaling
