

FITC-11-dUTP reagent

FITC-11-dUTP

CATALOG #
AAA178131

PRODUCT SYNONYMS

FITC-11-Dutp; FITC-11-dUTP; FITC-11-dUTP reagent

PRODUCT SPECIFICATIONS

Samples	Paraffin section, frozen section, cell slide
Detection Instrument	Fluorescence Microscope
Dye Type	FITC
Channel Set	FITC
Filter Set	FITC
Detection Principle	Chromosome DNA breakage is an important marker event in cell apoptosis. A series of DNA 3'-OH terminus is produced by DNA double-strand breaks in apoptotic cells or whenever there is a gap in one strand. The fluorescen labeled dUTP can be linked to the 3'-OH terminus of the broken DNA under the action of terminal deoxyribonucleotide transferase (TdT). Fluorescence of dUTP conjugate can be detected by flow cytometer or fluorescence microscope.
Preparation and Storage	Store at -20 degree C, shading light Estimated Expiration: 12 months Shipping: Ice bag

IMAGES

Application Data

HeLa cells was treated with DNase I to fragment the DNA. DNA strand breaks showed intense fluorescent staining in DNase I treated sample.(Green

Application Data

Paraffin embedded mouse intestinal tissue was treated with DNase I to fragment the DNA. DNA strand breaks showed intense fluorescent staining in DNase I treated sample.(Green

ADDITIONAL INFORMATION

Product Categories/Family for FITC-11-dUTP reagent **Cell Apoptosis**

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
