ADDITIONAL INFORMATION

Related Product Information for ACC assay kit	Principle of the Assay: The chromogenic agent can be catalyzed by acid phosphatase to produce p-nitrophenol in acidic condition. P-nitrophenol has a maximum absorption at 405 nm. The activity of TRAP can be calculated by measuring the amount of produced p-nitrophenol. The activity of acid phosphatase being detected in the presence of tartaric acid is regarded as TRAP activity. Intended Uses: This kit can measure tartrate resistant acid phosphatase (TRAP) activity in serum, plasma, urine, animal tissue and cell samples.
Product Categories/Family for ACC assay kit	Glycolysis & Lipid Metabolism
