Background: The interleukin-1 receptor antagonist (IL-1RA) is a protein that in humans is encoded by the IL1RN gene. The human IL1RN gene was localized to the long arm of chromosome 2 at band 2q14. by fluorescence in situ hybridization. IL-1RA is a member of the interleukin 1 cytokine family. This protein inhibits the activities of interleukin 1, alpha (IL1A) and interleukin 1, beta (IL1B), and modulates a variety of interleukin 1 related immune and inflammatory responses.

Principle of the Assay: The Mouse IL-1RA ELISA (Enzyme-Linked Immunosorbent Assay) kit is an in vitro enzyme-linked immunosorbent assay for the quantitative measurement of Mouse IL-1RA in Cell Culture Supernatants, Serum, Plasma. This assay employs an antibody specific for Mouse IL-1RA coated on a 96-well plate. Standards and samples are pipetted into the wells and IL-1RA present in a sample is bound to the wells by the immobilized antibody. The wells are washed and biotinylated anti-Mouse IL-1RA antibody is added. After washing away unbound biotinylated antibody, HRP-conjugated streptavidin is pipetted to the wells. The wells are again washed, a TMB substrate solution is added to the wells and color develops in proportion to the amount of IL-1RA bound. The Stop Solution changes the color from blue to yellow, and the intensity of the color is measured at 450 nm.
