

## Canine Lactoferrin ELISA Kit | LTF elisa kit

Canine Lactoferrin (LTF) ELISA Kit

CATALOG #  
**AAA180527**

REACTIVITY  
**Canine**

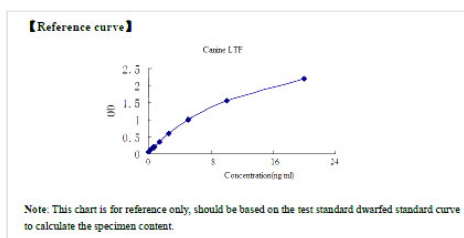

### PRODUCT SYNONYMS

Lactoferrin; Canine Lactoferrin (LTF) ELISA Kit; LTF elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                    |
|-------------------------|--------------------------------------------------------------------|
| Reactivity              | Canine                                                             |
| Specificity             | No cross-reaction with other factors.                              |
| Sequence Length         | 475                                                                |
| Samples                 | Canine serum, plasma or cell culture supernatant and organizations |
| Assay Type              | Quantitative Sandwich                                              |
| Detection Range         | 20 ng/ml-0.312 ng/ml                                               |
| Sensitivity             | 0.06 ng/ml                                                         |
| Intra-assay Precision   | <= 8%                                                              |
| Inter-assay Precision   | <= 12%                                                             |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                |

### ADDITIONAL INFORMATION

#### Related Product Information for LTF elisa kit

Principle of the Assay: This experiment use double-sandwich elisa technique and the ELISA Kit provided is typical. The pre-coated antibody is Canine LTF monoclonal antibody and the detecting antibody is polyclonal antibody with biotin labeled. Samples and biotin labeling antibody are added into ELISA plate wells and washed out with PBS or TBS. Then Avidin-peroxidase conjugates are added to ELISA wells in order; Use TMB substrate for coloring after reactant thoroughly washed out by PBS or TBS. TMB turns into blue in peroxidase catalytic and finally turns into yellow under the action of acid. The color depth and the testing factors in samples are positively correlated.

### NCBI AND UNIPROT INFORMATION
