

General Glutathione (GSH) ELISA Kit | GSH elisa kit

General Glutathione (GSH) ELISA Kit

CATALOG #
AAA181903

REACTIVITY
General

PRODUCT SYNONYMS

Glutathione (GSH); General Glutathione (GSH) ELISA Kit; L-Reduced Glutathione; GSH elisa kit

PRODUCT SPECIFICATIONS

Reactivity	General
Specificity	This assay has high sensitivity and excellent specificity for detection of glutathione. No significant cross-reactivity or interference between glutathione and analogues was observed.
Samples	Serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids
Assay Type	Quantitative Competitive
Detection Range	1.23-100ug/mL
Sensitivity	< 0.52ug/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level glutathione were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level glutathione were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for GSH elisa kit	Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of glutathione in serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids. Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to glutathione has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled glutathione and unlabeled glutathione (Standards or samples) with the pre-coated antibody specific to glutathione. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of glutathione in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of glutathione in the sample.
