

Human Copeptin (CPP) ELISA Kit | CPP elisa kit

Human Copeptin (CPP) ELISA Kit

CATALOG #
AAA181911

REACTIVITY
Human

PRODUCT SYNONYMS

Copeptin (CPP); Human Copeptin (CPP) ELISA Kit; C-Terminal Provasopressin; Vasopressin-Neurophysin 2-Copeptin; CPP elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of CNCbl. No significant cross-reactivity or interference between CNCbl and analogues was observed.
Sequence Length	38
Samples	Serum, Plasma, Tissue Homogenates And Other Biological Fluids
Assay Type	Quantitative Competitive
Detection Range	123.5-10,000pg/mL
Sensitivity	50.5pg/mL.
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level CNCbl were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level CNCbl were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for CPP elisa kit	Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of CNCbl in serum, plasma, tissue homogenates and other biological fluids. Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to CNCbl has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled CNCbl and unlabeled CNCbl (Standards or samples) with the pre-coated antibody specific to CNCbl. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of CNCbl in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of CNCbl in the sample.

NCBI AND UNIPROT INFORMATION

NCBI GI #	225612
NCBI Official Full Name	copeptin

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
