

## Human Neurokinin A (NKA) ELISA Kit | NKA elisa kit

Human Neurokinin A (NKA) ELISA Kit

CATALOG #  
**AAA181937**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

Neurokinin A (NKA); Human Neurokinin A (NKA) ELISA Kit; NK-A; SK; Substance K; Neuropeptide K; Neurokinin K; Neuromedin L; Neuropeptide gamma; NKA elisa kit

| Reactivity                                        | Human                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Specificity                                       | This assay has high sensitivity and excellent specificity for detection of Neurokinin A (NKA). No significant cross-reactivity or interference between Neurokinin A (NKA) and analogues was observed.                                                                                                                                                                                                                                                                                      |
| Sequence Length                                   | 10                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Assay Type                                        | Competitive Inhibition                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Application                                       | Enzyme-linked immunosorbent assay for Antigen Detection.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Intra-assay Precision (Precision within an assay) | 3 samples with low, middle and high level Neurokinin A (NKA) were tested 20 times on one plate, respectively.                                                                                                                                                                                                                                                                                                                                                                              |
| Inter-assay Precision (Precision between assays)  | 3 samples with low, middle and high level Neurokinin A (NKA) were tested on 3 different plates, 8 replicates in each plate.                                                                                                                                                                                                                                                                                                                                                                |

| Inter-Assay                                       | CV<12%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Preparation and Storage                           | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for NKA elisa kit | This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to Neurokinin A (NKA) has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled Neurokinin A (NKA) and unlabeled Neurokinin A (NKA) (Standards or samples) with the pre-coated antibody specific to Neurokinin A (NKA). After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of Neurokinin A (NKA) in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of Neurokinin A (NKA) in the sample. |
