

Mouse Cholecystokinin 8, Octapeptide (CCK8) ELISA Kit | CCK8 elisa kit

Mouse Cholecystokinin 8, Octapeptide (CCK8) ELISA Kit

CATALOG #
AAA182218

REACTIVITY
Mouse

PRODUCT SYNONYMS

Cholecystokinin 8; Octapeptide (CCK8); Mouse Cholecystokinin 8; Octapeptide (CCK8) ELISA Kit; Sincalide; CCK8 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of CCK8. No significant cross-reactivity or interference between CCK8 and analogues was observed.
Samples	Mouse serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids
Assay Type	Quantitative Competitive
Detection Range	12.35-1,000pg/mL
Sensitivity	<4.85pg/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level CCK8 were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level CCK8 were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for CCK8 elisa kit	Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of CCK8 in mouse serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids. Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. An antibody specific to CCK8 has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled CCK8 and unlabeled CCK8 (Standards or samples) with the pre-coated antibody specific to CCK8. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of CCK8 in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of CCK8 in the sample.
