

## Human Apelin (APLN) ELISA Kit | APLN elisa kit

Human Apelin (APLN) ELISA Kit

CATALOG #  
AAA182354

REACTIVITY  
Human

### PRODUCT SYNONYMS

Apelin (APLN); Human Apelin (APLN) ELISA Kit; XNPEP2; APEL; APJ endogenous ligand; APLN elisa kit

| Reactivity                                        | Human                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Specificity                                       | This assay has high sensitivity and excellent specificity for detection of Apelin (APLN). No significant cross-reactivity or interference between Apelin (APLN) and analogues was observed.                                                                                                                                                                                                                                                                                                |
| Sequence Length                                   | 77                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Detection Range                                   | 19.75-1600pg/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Sensitivity                                       | < 8.25pg/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Application                                       | Enzyme-linked immunosorbent assay for Antigen Detection.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Intra-assay Precision (Precision within an assay) | 3 samples with low, middle and high level Apelin (APLN) were tested 20 times on one plate, respectively.                                                                                                                                                                                                                                                                                                                                                                                   |
| Inter-assay Precision (Precision between assays)  | 3 samples with low, middle and high level Apelin (APLN) were tested on 3 different plates, 8 replicates in each plate.                                                                                                                                                                                                                                                                                                                                                                     |
| CV(%) =                                           | SD/meanX100                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Inter-Assay                                       | CV<12%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Preparation and Storage                           | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for APLN elisa kit | This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to Apelin (APLN) has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled Apelin (APLN) and unlabeled Apelin (APLN) (Standards or samples) with the pre-coated antibody specific to Apelin (APLN). After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of Apelin (APLN) in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of Apelin (APLN) in the sample. |

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
