Intra-assay Precision (Precision within an assay)	3 samples with low, middle and high level Glycogen Synthase Kinase 3 Alpha (GSK3a) were tested 20 times on one plate, respectively.
Inter-assay Precision (Precision between assays)	3 samples with low, middle and high level Glycogen Synthase Kinase 3 Alpha (GSK3a) were tested on 3 different plates, 8 replicates in each plate.
CV(%) =	SD/meanX100
Intra-Assay	CV<10%
Inter-Assay	CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for GSK3a elisa kit	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Glycogen Synthase Kinase 3 Alpha (GSK3a). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Glycogen Synthase Kinase 3 Alpha (GSK3a). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Glycogen Synthase Kinase 3 Alpha (GSK3a), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Glycogen Synthase Kinase 3 Alpha (GSK3a) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
