

Rat Vitronectin (VTN) ELISA Kit | VTN elisa kit

Rat Vitronectin (VTN) ELISA Kit

CATALOG #
AAA184295

REACTIVITY
Rat

PRODUCT SYNONYMS

Vitronectin (VTN); Rat Vitronectin (VTN) ELISA Kit; V75; VN; VNT; Serum Spreading Factor; Somatomedin B; Complement S-Protein; VTN elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Specificity	This assay has high sensitivity and excellent specificity for detection of Vitronectin (VTN). No significant cross-reactivity or interference between Vitronectin (VTN) and analogues was observed.
Sequence Length	478
Assay Type	Double-antibody Sandwich
Samples	Serum, Plasma, Tissue Homogenates, Cell Lysates, Cell Culture Supernates and Other Biological Fluids
Detection Range	1.56-100ng/mL
Sensitivity	< 0.71ng/mL
Application	Enzyme-linked immunosorbent assay for Antigen Detection.
Intra-assay Precision (Precision within an assay)	3 samples with low, middle and high level Vitronectin (VTN) were tested 20 times on one plate, respectively.
Inter-assay Precision (Precision between assays)	3 samples with low, middle and high level Vitronectin (VTN) were tested on 3 different plates, 8 replicates in each plate.
CV(%) =	SD/meanX100
Intra-Assay	CV<10%
Inter-Assay	CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for VTN elisa kit	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Vitronectin (VTN). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Vitronectin (VTN). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Vitronectin (VTN), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Vitronectin (VTN) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
