

Mouse Thioredoxin Binding Protein 2 (TBP2) ELISA Kit | TBP2 elisa kit

Mouse Thioredoxin Binding Protein 2 (TBP2) ELISA Kit

CATALOG #
AAA184401

REACTIVITY
Mouse

PRODUCT SYNONYMS

Thioredoxin Binding Protein 2 (TBP2); Mouse Thioredoxin Binding Protein 2 (TBP2) ELISA Kit; TXNIP; HHCPA78; THIF; VDUP1; Thioredoxin Interacting Protein; Vitamin D3-Upregulated Protein 1; Upregulated By 1; 25-Dihydroxyvitamin D-3; TBP2 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of TBP2. No significant cross-reactivity or interference between TBP2 and analogues was observed.
Samples	Mouse tissue homogenates, cell lysates and other biological fluids
Detection Range	0.312-20ng/mL
Sensitivity	< 0.117ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level TBP2 were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level TBP2 were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for TBP2 elisa kit

Principle of the Assay: The microplate provided in this kit has been pre-coated with an antibody specific to TBP2. Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to TBP2. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain TBP2, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of TBP2 in the samples is then determined by comparing the O.D. of the samples to the standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
