| Reactivity                                        | Rat                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Specificity                                       | This assay has high sensitivity and excellent specificity for detection of Microtubule Associated Protein 4 (MAP4). No significant cross-reactivity or interference between Microtubule Associated Protein 4 (MAP4) and analogues was observed.                                                                                                                                                                                                                                            |
| Sequence Length                                   | 99                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Inter-Assay                                       | CV<12%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Preparation and Storage                           | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for MAP4 elisa kit | The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Microtubule Associated Protein 4 (MAP4). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Microtubule Associated Protein 4 (MAP4). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Microtubule Associated Protein 4 (MAP4), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Microtubule Associated Protein 4 (MAP4) in the samples is then determined by comparing the O.D. of the samples to the standard curve. |

| Molecular Weight           | 10,441 Da                        |
| NCBI Official Full Name    | microtubule-associated protein 4 |
| UniProt Protein Name       | Microtubule-associated protein 4 |
| UniProt Gene Name          | MAP4                             |
| UniProt Synonym Gene Names | MAP-4                            |

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
