

## Rat Carboxylesterase 1 (CES1) ELISA Kit | CES1 elisa kit

Rat Carboxylesterase 1 (CES1) ELISA Kit

CATALOG #  
AAA185692

REACTIVITY  
Rat

### PRODUCT SYNONYMS

Carboxylesterase 1 (CES1); Rat Carboxylesterase 1 (CES1) ELISA Kit; ACAT; CEH; CES2; HMSE1; PCE1; SES1; TGH; Retinyl ester hydrolase; Serine esterase 1; Triacylglycerol hydrolase; Egasyn; Cocaine carboxylesterase; Liver Carboxylesterase 1; CES1 elisa kit

### PRODUCT SPECIFICATIONS

|                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Reactivity                                        | Rat                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Specificity                                       | This assay has high sensitivity and excellent specificity for detection of Carboxylesterase 1 (CES1). No significant cross-reactivity or interference between Carboxylesterase 1 (CES1) and analogues was observed.                                                                                                                                                                                                                                                                        |
| Sequence Length                                   | 339                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Assay Type                                        | Double-antibody Sandwich                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Inter-Assay                                       | CV<12%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Preparation and Storage                           | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for CES1 elisa kit | The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Carboxylesterase 1 (CES1). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Carboxylesterase 1 (CES1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Carboxylesterase 1 (CES1), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Carboxylesterase 1 (CES1) in the samples is then determined by comparing the O.D. of the samples to the standard curve. |

| NCBI Official Full Name   | carboxylesterase 1 |
| NCBI Official Symbol      | CXE1               |
| NCBI Protein Information  | carboxylesterase 1 |

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
