

Human Thrombospondin 2 (THBS2) ELISA Kit | THBS2 elisa kit

Human Thrombospondin 2 (THBS2) ELISA Kit

CATALOG #
AAA186395

REACTIVITY
Human

PRODUCT SYNONYMS

Thrombospondin 2 (THBS2); Human Thrombospondin 2 (THBS2) ELISA Kit; TSP2; THBS2 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of THBS2. No significant cross-reactivity or interference between THBS2 and analogues was observed.
Sequence Length	1,172
Samples	Human plasma
Assay Type	Quantitative Sandwich
Detection Range	2.4-150ng/mL
Sensitivity	< 1.0ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level THBS2 were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level THBS2 were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for THBS2 elisa kit	Intended Uses: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of THBS2 in human plasma. Principle of the Assay: The microplate provided in this kit has been pre-coated with an antibody specific to THBS2. Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to THBS2. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain THBS2, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of THBS2 in the samples is then determined by comparing the O.D. of the samples to the standard curve.
