

# Human Insulin Like Growth Factor Binding Protein, Acid Labile Subunit (IGFALS) ELISA Kit | IGFALS elisa kit

Human Insulin Like Growth Factor Binding Protein, Acid Labile Subunit (IGFALS) ELISA Kit

CATALOG #  
**AAA186427**

REACTIVITY  
**Human**

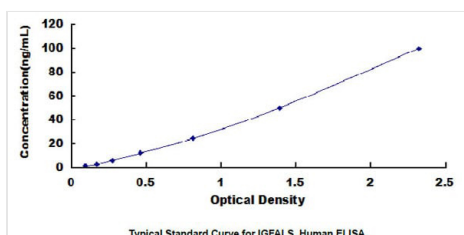

## PRODUCT SYNONYMS

Insulin Like Growth Factor Binding Protein; Acid Labile Subunit (IGFALS); Human Insulin Like Growth Factor Binding Protein; Acid Labile Subunit (IGFALS) ELISA Kit; ALS; IGFALS elisa kit

## PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of IGFALS. No significant cross-reactivity or interference between IGFALS and analogues was observed.                                                                                                                                                                                                                                                                                                              |
| Sequence Length         | 643                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Samples                 | Serum, plasma, tissue homogenates and other biological fluids                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Assay Type              | Quantitative Sandwich                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Detection Range         | 1.56-100ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Sensitivity             | < 0.55ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level IGFALS were tested 20 times on one plate, respectively. Intra-Assay: CV<10%                                                                                                                                                                                                                                                                                                                   |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level IGFALS were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%                                                                                                                                                                                                                                                                                 |
| Preparation and Storage | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for IGFALS elisa kit | <p>Intended Uses: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of IGFALS in human serum, plasma, tissue homogenates and other biological fluids.</p> <p>Principle of the Assay: The microplate provided in this kit has been pre-coated with an antibody specific to IGFALS. Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to IGFALS. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain IGFALS, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of IGFALS in the samples is then determined by comparing the O.D. of the samples to the standard curve.</p> |
