

Mouse Cytochrome C Oxidase Subunit I (COX1) ELISA Kit | COX1 elisa kit

Mouse Cytochrome C Oxidase Subunit I (COX1) ELISA Kit

CATALOG #
AAA188216

REACTIVITY
Mouse

PRODUCT SYNONYMS

Cytochrome C Oxidase Subunit I (COX1); Mouse Cytochrome C Oxidase Subunit I (COX1) ELISA Kit; MT-CO1; MTCO1; COI; COXI; Mitochondrially Encoded Cytochrome C Oxidase I; Cytochrome c oxidase polypeptide I; COX1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of Cytochrome C Oxidase Subunit I (COX1). No significant cross-reactivity or interference between Cytochrome C Oxidase Subunit I (COX1) and analogues was observed.
Sequence Length	499
Assay Type	Double-antibody Sandwich
Samples	Tissue Homogenates, Cell Lysates, Cell Culture Supernates and Other Biological Fluids
Detection Range	0.312-20ng/mL
Sensitivity	The minimum detectable dose of this kit is typically less than 0.113ng/mL
Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Cytochrome C Oxidase Subunit I (COX1) were tested 20 times on one plate, respectively. Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Cytochrome C Oxidase Subunit I (COX1) were tested on 3 different plates, 8 replicates in each plate. $CV(\%) = SD/mean \times 100$ Intra-Assay: $CV < 10\%$ Inter-Assay: $CV < 12\%$
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for COX1 elisa kit	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Cytochrome C Oxidase Subunit I (COX1). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Cytochrome C Oxidase Subunit I (COX1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Cytochrome C Oxidase Subunit I (COX1), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Cytochrome C Oxidase Subunit I (COX1) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	940534763
NCBI Official Full Name	cytochrome c oxidase subunit I (mitochondrion)

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
