

Human Interferon Induced Protein 44 (IFI44) ELISA Kit | IFI44 elisa kit

Human Interferon Induced Protein 44 (IFI44) ELISA Kit

CATALOG #
AAA188323

REACTIVITY
Human

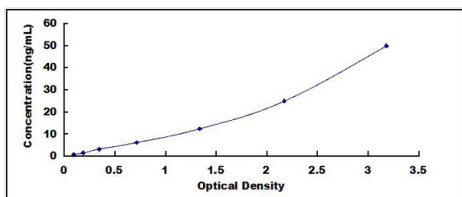

PRODUCT SYNONYMS

Interferon Induced Protein 44 (IFI44); Human Interferon Induced Protein 44 (IFI44) ELISA Kit; MTAP44; p44; Microtubule-associated protein 44; IFI44 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of Interferon Induced Protein 44 (IFI44). No significant cross-reactivity or interference between Interferon Induced Protein 44 (IFI44) and analogues was observed.
Sequence Length	444
Assay Type	Double-antibody Sandwich
Samples	Tissue Homogenates, Cell Lysates and Other Biological Fluids
Detection Range	0.78-50ng/mL
Sensitivity	The minimum detectable dose of this kit is typically less than 0.29ng/mL
Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Interferon Induced Protein 44 (IFI44) were tested 20 times on one plate, respectively. Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Interferon Induced Protein 44 (IFI44) were tested on 3 different plates, 8 replicates in each plate. $CV(\%) = SD/mean \times 100$ Intra-Assay: $CV < 10\%$ Inter-Assay: $CV < 12\%$
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for IFI44 elisa kit	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Interferon Induced Protein 44 (IFI44). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Interferon Induced Protein 44 (IFI44). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Interferon Induced Protein 44 (IFI44), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Interferon Induced Protein 44 (IFI44) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	166706911
NCBI GenBank Nucleotide #	NP_006408.3
UniProt Accession #	Q8TCB0
NCBI Official Full Name	interferon-induced protein 44
UniProt Protein Name	Interferon-induced protein 44
UniProt Gene Name	IFI44
UniProt Synonym Gene Names	MTAP44; p44
UniProt Entry Name	IFI44_HUMAN

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
