

Chicken Interferon Beta (IFN β) ELISA Kit | IFN β elisa kit

Chicken Interferon Beta (IFN β) High Sensitive ELISA Kit

CATALOG # AAA188486	REACTIVITY Chicken	APPLICATIONS ELISA
-------------------------------	------------------------------	------------------------------

PRODUCT SYNONYMS

Interferon Beta (IFN β); Chicken Interferon Beta (IFN β) High Sensitive ELISA Kit; Interferon Beta; IFNB1; IFN-B; IFB; IFF; IFNB; Interferon Beta 1 Fibroblast; IFN β elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Specificity	This assay has high sensitivity and excellent specificity for detection of High Sensitive Interferon Beta (IFN β). No significant cross-reactivity or interference between High Sensitive Interferon Beta (IFN β) and analogues was observed.
Sequence Length	203
Assay Type	Double-antibody Sandwich
Samples	Serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids
Detection Range	3.12-200pg/mL
Sensitivity	The minimum detectable dose of this kit is typically less than 1.16pg/mL
Applicable Applications for IFN β elisa kit	ELISA
Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level High Sensitive Interferon Beta (IFN β) were tested 20 times on one plate, respectively. Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level High Sensitive Interferon Beta (IFN β) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 Intra-Assay: CV<10% Inter-Assay: CV<12%
Test Principle	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to High Sensitive Interferon Beta (IFN β). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to High Sensitive Interferon Beta (IFN β). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain High Sensitive Interferon Beta (IFN β), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of High Sensitive Interferon Beta (IFN β) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

NCBI AND UNIPROT INFORMATION

NCBI GI #	67514601
NCBI GeneID	554219
NCBI Accession #	NP_001020007.1
NCBI GenBank Nucleotide #	NP_001020007.1
UniProt Accession #	Q90873
NCBI Official Full Name	interferon type B
NCBI Official Synonym Full Names	interferon omega 1
NCBI Official Symbol	IFNW1
NCBI Official Synonym Symbols	IFNB; IFN_B; IFN-beta
NCBI Protein Information	interferon type B
UniProt Protein Name	Interferon type B
UniProt Gene Name	IFNB
UniProt Synonym Gene Names	IFN2; IFN-beta
UniProt Entry Name	IFNB_CHICK

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
