| <b>Reactivity</b>                                    | Human                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Specificity</b>                                   | This assay has high sensitivity and excellent specificity for detection of Serpin B3 (SERPINB3). No significant cross-reactivity or interference between Serpin B3 (SERPINB3) and analogues was observed.                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Sequence Length</b>                               | 390                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Assay Type</b>                                    | Double-antibody Sandwich                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Samples</b>                                       | Serum, plasma, tissue homogenates and other biological fluids.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Detection Range</b>                               | 13.7-10,000pg/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Sensitivity</b>                                   | The minimum detectable dose of this kit is typically less than 5.4pg/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Applicable Applications for SERPINB3 clia kit</b> | CLIA (Chemiluminescence Immunoassay)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Precision</b>                                     | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Serpin B3 (SERPINB3) were tested 20 times on one plate, respectively.<br>Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Serpin B3 (SERPINB3) were tested on 3 different plates, 8 replicates in each plate.<br>CV(%) = SD/meanX100<br>Intra-Assay: CV<10%<br>Inter-Assay: CV<12%                                                                                                                                                                      |
| <b>Test Principle</b>                                | The microplate provided in this kit has been pre-coated with an antibody specific to Serpin B3 (SERPINB3). Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to Serpin B3 (SERPINB3). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then the mixture of substrate A and B is added to generate glow light emission kinetics. Upon plate development, the intensity of the emitted light is proportional to the Serpin B3 (SERPINB3) level in the sample or standard. |
| <b>Preparation and Storage</b>                       | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.                                                                                                      |
