

General Corticosterone (Cort) ELISA Kit | Cort elisa kit

General Corticosterone (Cort) Wide-range ELISA Kit

CATALOG # AAA189169	REACTIVITY General	APPLICATIONS ELISA
-------------------------------	------------------------------	------------------------------

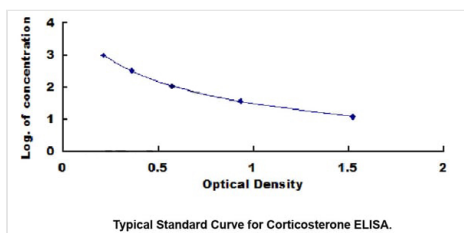

PRODUCT SYNONYMS

Corticosterone (Cort); General Corticosterone (Cort) Wide-range ELISA Kit; Corticosterone; Corticosterone; Cort elisa kit

PRODUCT SPECIFICATIONS

Reactivity	General
Specificity	This assay has high sensitivity and excellent specificity for detection of corticosterone. No significant cross-reactivity or interference between corticosterone and analogues was observed.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, urine and other biological fluids
Detection Range	12.35-1,000ng/mL
Sensitivity	< 5.13ng/mL
Applicable Applications for Cort elisa kit	ELISA
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level corticosterone were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level corticosterone were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for Cort elisa kit	Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to corticosterone has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled corticosterone and unlabeled corticosterone (Standards or samples) with the pre-coated antibody specific to corticosterone. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of corticosterone in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of corticosterone in the sample. Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of corticosterone in serum, plasma, urine and other biological fluids.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
