ADDITIONAL INFORMATION

Related Product Information for HMGR elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rat HMGR antibody. HMGR present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rat HMGR Antibody is added and binds to HMGR in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated HMGR antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rat HMGR. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Rat HMG-CoA Reductase (also known as HMGR) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
