ADDITIONAL INFORMATION

Related Product Information for LPL elisa kit

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Hamster LPL antibody. LPL present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Hamster LPL Antibody is added and binds to LPL in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated LPL antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Hamster LPL. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

Intended Uses: This sandwich kit is for the accurate quantitative detection of Hamster lipoprotein lipase (also known as LPL) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
