

Methylglyoxal (MG) ELISA Kit | MG elisa kit

General species Methylglyoxal (MG) ELISA Kit

CATALOG #
AAA189653

REACTIVITY
General species

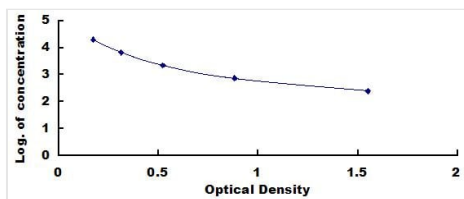

PRODUCT SYNONYMS

Methylglyoxal (MG); General species Methylglyoxal (MG) ELISA Kit; Pyruvaldehyde; 2-Oxopropanal; MG/Methylglyoxal; MG elisa kit

PRODUCT SPECIFICATIONS

Reactivity	General species
Specificity	This assay has high sensitivity and excellent specificity for detection of methylglyoxal. No significant cross-reactivity or interference between methylglyoxal and analogues was observed.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids
Detection Range	246.9-20,000pg/mL
Sensitivity	< 93.7pg/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level methylglyoxal were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level methylglyoxal were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	Store at 4 degree C for 1 month/-20 degree C for long-term (within shelf life) Shelf Life: 8 months The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for MG elisa kit	Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to methylglyoxal has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled methylglyoxal and unlabeled methylglyoxal (Standards or samples) with the pre-coated antibody specific to methylglyoxal. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of methylglyoxal in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of methylglyoxal in the sample. Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of methylglyoxal in serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids.
Product Categories/Family for MG elisa kit	Metabolic pathway; Endocrinology; Cardiovascular biology; Hepatology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
