ADDITIONAL INFORMATION

Related Product Information for GFAP elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rabbit GFAP antibody. GFAP present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rabbit GFAP Antibody is added and binds to GFAP in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated GFAP antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rabbit GFAP. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Rabbit glial fibrillary acidic protein (also known as GFAP) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
