ADDITIONAL INFORMATION

Related Product Information for TNF-alpha elisa kit

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Cat TNFA antibody. TNFA present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Cat TNFA Antibody is added and binds to TNFA in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated TNFA antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Cat TNFA. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

Intended Uses: This sandwich kit is for the accurate quantitative detection of Cat Tumor necrosis factor Alpha (also known as TNFA) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
