ADDITIONAL INFORMATION

Related Product Information for SLC40A1 elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human SLC40A1 antibody. SLC40A1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human SLC40A1 Antibody is added and binds to SLC40A1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated SLC40A1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human SLC40A1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Human ferroportin 1 (also known as SLC40A1) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
