

## Human SRPX/Sushi Repeat-Containing Protein SRPX ELISA Kit | SRPX elisa kit

Human SRPX/Sushi Repeat-Containing Protein SRPX ELISA Kit

CATALOG #  
**AAA196836**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

SRPX/Sushi Repeat-Containing Protein SRPX; Human SRPX/Sushi Repeat-Containing Protein SRPX ELISA Kit; Sushi repeat-containing protein SRPX; ETX1; SRPX elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                       |
|-------------------------|---------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                 |
| Specificity             | Natural and recombinant Human Sushi repeat-containing protein SRPX                    |
| Sequence Length         | 444                                                                                   |
| Samples                 | Serum, plasma, tissue homogenates, cell culture supernates or other biological fluids |
| Preparation and Storage | For long term storage, please store the entire kit at -20 degree C.                   |

### ADDITIONAL INFORMATION

#### Related Product Information for SRPX elisa kit

**Principle of the Assay:** The microtiter plate provided in this kit has been pre-coated with an antibody specific to target antigen. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific for target antigen and then avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then a TMB substrate solution is added to each well. Only those wells that contain target antigen, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm  $\pm$  2 nm. The concentration of target antigen in the samples is then determined by comparing the O.D. of the samples to the standard curve.

**Intended Uses:** This immunoassay kit allows for the in vitro quantitative determination of target antigen concentrations in serum, plasma, tissue homogenates, cell culture supernates or other biological fluids.
