ADDITIONAL INFORMATION

Related Product Information for anti-ING3 antibody	This is a rabbit polyclonal antibody against ING3. It was validated on Western Blot using a cell lysate as a positive control. Target Description: ING3 is similar to ING1, a tumor suppressor protein that can interact with TP53, inhibit cell growth, and induce apoptosis. This protein contains a PHD-finger, which is a common motif in proteins involved in chromatin remodeling. This gene can activate p53 trans-activated promoters, including promoters of p21/waf1 and bax. Overexpression of this gene has been shown to inhibit cell growth and induce apoptosis. Allelic loss and reduced expression of this gene were detected in head and neck cancers.
