ADDITIONAL INFORMATION

Related Product Information for anti-CSRP3 antibody	This is a rabbit polyclonal antibody against CSRP3. It was validated on Western Blot using a cell lysate as a positive control. Target Description: The CSRP3 gene encodes a member of the CSRP family of LIM domain proteins, which may be involved in regulatory processes important for development and cellular differentiation. The LIM/double zinc-finger motif found in this protein is found in a group of proteins with critical functions in gene regulation, cell growth, and somatic differentiation. Mutations in CSRP3 are thought to cause heritable forms of hypertrophic cardiomyopathy (HCM) and dilated cardiomyopathy (DCM) in humans.This gene encodes a member of the CSRP family of LIM domain proteins, which may be involved in regulatory processes important for development and cellular differentiation.
