ADDITIONAL INFORMATION

Related Product Information for anti-APT _X antibody	This is a rabbit polyclonal antibody against APT_X. It was validated on Western Blot and immunohistochemistry Target Description: APT_X is a member of the histidine triad (HIT) superfamily, some of which have nucleotide-binding and diadenosine polyphosphate hydrolase activities. APT_X may play a role in single-stranded DNA repair. Mutations in this gene have been associated with ataxia-ocular apraxia.This gene encodes a member of the histidine triad (HIT) superfamily, some of which have nucleotide-binding and diadenosine polyphosphate hydrolase activities. The encoded protein may play a role in single-stranded DNA repair. Mutations in this gene have been associated with ataxia-ocular apraxia. Multiple transcript variants encoding distinct isoforms have been identified for this gene, however, the full length nature of some variants has not been determined.This gene encodes a member of the histidine triad (HIT) superfamily, some of which have nucleotide-binding and diadenosine polyphosphate hydrolase activities.
