ADDITIONAL INFORMATION

Related Product Information for anti-KRT2 antibody	This is a rabbit polyclonal antibody against KRT2A. It was validated on Western Blot and immunohistochemistry Target Description: KRT2A is a member of the keratin gene family. The type II cytokeratins consist of basic or neutral proteins which are arranged in pairs of heterotypic keratin chains coexpressed during differentiation of simple and stratified epithelial tissues. This type II cytokeratin is expressed largely in the upper spinous layer of epidermal keratinocytes and mutations in this gene have been associated with bullous congenital ichthyosiform erythroderma. The protein encoded by this gene is a member of the keratin gene family. This type II cytokeratin is expressed largely in the upper spinous layer of epidermal keratinocytes and mutations in this gene have been associated with bullous congenital ichthyosiform erythroderma. The type II cytokeratins are clustered in a region of chromosome 12q12-q13.
