ADDITIONAL INFORMATION

Related Product Information for anti-CRMP1 antibody	This is a rabbit polyclonal antibody against CRMP1. It was validated on Western Blot using a cell lysate as a positive control. Target Description: CRMP1 is a member of a family of cytosolic phosphoproteins expressed exclusively in the nervous system. The protein is thought to be a part of the semaphorin signal transduction pathway implicated in semaphorin-induced growth cone collapse during neural development. This gene encodes a member of a family of cytosolic phosphoproteins expressed exclusively in the nervous system. The encoded protein is thought to be a part of the semaphorin signal transduction pathway implicated in semaphorin-induced growth cone collapse during neural development. Alternative splicing results in multiple transcript variants. This gene encodes a member of a family of cytosolic phosphoproteins expressed exclusively in the nervous system.
