ADDITIONAL INFORMATION

Related Product Information for anti-UBE2D2 antibody	This is a rabbit polyclonal antibody against UBE2D2. It was validated on Western Blot using a cell lysate as a positive control. Target Description: The modification of proteins with ubiquitin is an important cellular mechanism for targeting abnormal or short-lived proteins for degradation. Ubiquitination involves at least three classes of enzymes: ubiquitin-activating enzymes, or E1s, ubiquitin-conjugating enzymes, or E2s, and ubiquitin-protein ligases, or E3s. UBE2D2 is a member of the E2 ubiquitin-conjugating enzyme family. This enzyme functions in the ubiquitination of the tumor-suppressor protein p53, which is induced by an E3 ubiquitin-protein ligase.The modification of proteins with ubiquitin is an important cellular mechanism for targeting abnormal or short-lived proteins for degradation. Two alternatively spliced transcript variants have been found for this gene and they encode distinct isoforms.
