ADDITIONAL INFORMATION

Related Product Information for anti-HNF4G antibody	This is a rabbit polyclonal antibody against HNF4G. It was validated on Western Blot using a cell lysate as a positive control. Target Description: HNF4 was first identified as a DNA binding activity in rat liver nuclear extracts and then was found to be an orphan member of the nuclear receptor superfamily. Binding sites for this factor were identified in many tissue-specifically expressed genes, and the protein was found to be essential for early embryonic development in the mouse
