ADDITIONAL INFORMATION

Related Product Information for anti-PDE9A antibody

This is a rabbit polyclonal antibody against PDE9A. It was validated on Western Blot and immunohistochemistry

Target Description: PDE9A catalyzes the hydrolysis of cAMP and cGMP to their corresponding monophosphates. The protein plays a role in signal transduction by regulating the intracellular concentration of these cyclic nucleotides. The protein encoded by this gene catalyzes the hydrolysis of cAMP and cGMP to their corresponding monophosphates. The encoded protein plays a role in signal transduction by regulating the intracellular concentration of these cyclic nucleotides. Multiple transcript variants encoding several different isoforms have been found for this gene.
