ADDITIONAL INFORMATION

Related Product Information for anti-LILRA3 antibody	This is a rabbit polyclonal antibody against LILRA3. It was validated on Western Blot Target Description: Leukocyte Ig-like receptors (LIRs) are a family of immunoreceptors expressed predominantly on monocytes and B cells and at lower levels on dendritic cells and natural killer (NK) cells. All LIRs in subfamily B have an inhibitory function. LIRs in subfamily A, with short cytoplasmic domains lacking an immunoreceptor tyrosine-based inhibitory motif (ITIM) and with transmembrane regions containing a charged arginine residue, may initiate stimulatory cascades. One member of subfamily A (LILRA3) lacks a transmembrane region and is presumed to be a soluble receptor.
