ADDITIONAL INFORMATION

Related Product Information for anti-MED15 antibody	This is a rabbit polyclonal antibody against MED15. It was validated on Western Blot Target Description: The protein encoded by this gene is a subunit of the multiprotein complexes PC2 and ARC/DRIP and may function as a transcriptional coactivator in RNA polymerase II transcription. This gene contains stretches of trinucleotide repeats and is located in the chromosome 22 region which is deleted in DiGeorge syndrome. Alternative splicing results in multiple transcript variants.
