Intended Uses: This SFLT-1 ELISA kit is intended Laboratory for Research use only and is not for use in test or therapeutic procedures. The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of SFLT-1 in the sample, this SFLT-1 ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus SFLT-1 concentration. The concentration of SFLT-1 in the samples is then determined by comparing the O.D. of the samples to the standard curve.
