Related Product Information for 20S Proteasome elisa kit

Intended Use: The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of 20S PROTEASOME in the sample, This 20S PROTEASOME ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus 20S PROTEASOME concentration. The concentration of 20S PROTEASOME in the samples is then determined by comparing the O.D. of the samples to the standard curve.
