ADDITIONAL INFORMATION

Related Product Information for PPP3CA elisa kit

Intended Uses: This PPP1CA ELISA kit is intended Laboratory for Research use only. The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of PPP1CA in the sample, this PPP1CA ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus PPP1CA concentration. The concentration of PPP1CA in the samples is then determined by comparing the O.D. of the samples to the standard curve.
