Related Product Information for ARG2 elisa kit

Intended Uses: This ARG2 kit is intended Laboratory for Research use only. The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of ARG2 in the sample, this ARG2 Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus ARG2 concentration. The concentration of ARG2 in the samples is then determined by comparing the O.D. of the samples to the standard curve.
