

## Human Heat Shock Protein 90 (HSP90) ELISA Kit | HSP90 elisa kit

Human Heat Shock Protein 90 (HSP90) ELISA Kit

CATALOG #  
**AAA20611**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

Heat Shock Protein 90 (HSP90); Human Heat Shock Protein 90 (HSP90) ELISA Kit; HtpG; Hsp-90 NTD; N-Terminal Domain; HSP90 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of HSP90. No significant cross-reactivity or interference between HSP90 and analogues was observed.                                                                                                                                                                                                                                                                                                                           |
| Sequence Length         | 628                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Assay Type              | Double-antibody Sandwich                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Samples                 | Serum, Plasma, Tissue homogenates, Cell lysates, Cell culture supernates and other biological fluids                                                                                                                                                                                                                                                                                                                                                                                                  |
| Detection Range         | 3.12-200ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Sensitivity             | 1.09ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level HSP90 were tested 20 times on one plate, respectively. Intra-Assay: CV<10%                                                                                                                                                                                                                                                                                                                               |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level HSP90 were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%                                                                                                                                                                                                                                                                                             |
| Preparation and Storage | <p>The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.</p> <p>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.</p> |

| Related Product Information for HSP90 elisa kit | Principle of the Assay: The microplate provided in this kit has been pre-coated with an antibody specific to HSP90. Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to HSP90. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain HSP90, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of HSP90 in the samples is then determined by comparing the O.D. of the samples to the standard curve. |
