Intended Use: The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of NUCLEOTIDE-BINDING OLIGOMERIZATION DOMAIN in the sample, This NUCLEOTIDE-BINDING OLIGOMERIZATION DOMAIN ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus NUCLEOTIDE-BINDING OLIGOMERIZATION DOMAIN concentration. The concentration of NUCLEOTIDE-BINDING OLIGOMERIZATION DOMAIN in the samples is then determined by comparing the O.D. of the samples to the standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
