ADDITIONAL INFORMATION

Related Product Information for ACE elisa kit

Intended Use: The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of Mouse Angiotensin converting enzyme in the sample, This Mouse Angiotensin converting enzyme Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus Mouse Angiotensin converting enzyme concentration. The concentration of Mouse Angiotensin converting enzyme in the samples is then determined by comparing the O.D. of the samples to the standard curve.
