ADDITIONAL INFORMATION

Related Product Information for Gpx4 elisa kit	Intended Use: The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration ofCLUSTER OF DIFFERENTIATION 200in the sample, This CLUSTER OF DIFFERENTIATION 200ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versusCLUSTER OF DIFFERENTIATION 200concentration. The concentration ofCLUSTER OF DIFFERENTIATION 200in the samples is then determined by comparing the O.D. of the samples to the standard curve.
