Related Product Information for HLA-G elisa kit

Intended Use: The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of Rat HLA-G in the sample, This Rat HLA-G Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus Rat HLA-G concentration. The concentration of Rat HLA-G in the samples is then determined by comparing the O.D. of the samples to the standard curve.
