

Mouse tumor necrosis factor alpha (TNF-alpha) ELISA Kit | TNF-alpha elisa kit

Mouse tumor necrosis factor alpha (TNF-alpha) quantitative detection ELISA Kit

CATALOG #
AAA210689

REACTIVITY
Mouse

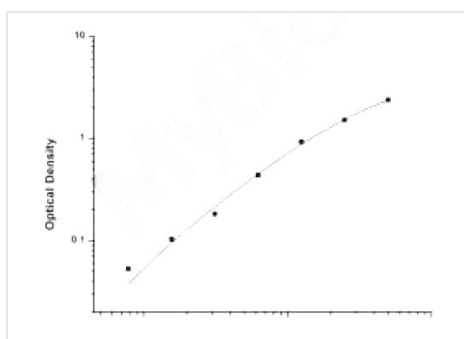

PRODUCT SYNONYMS

tumor necrosis factor alpha (TNF-alpha); Mouse tumor necrosis factor alpha (TNF-alpha) quantitative detection ELISA Kit; Mouse tumor necrosis factor alpha (TNF-alpha); TNF-alpha elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This kit identifies natural and recombinant Mouse TNF-alpha, with No crossing with structural analogs.
Assay Type	Quantitative Sandwich
Samples	Serum, plasma, and cell culture supernatant
Detection Range	20 pg/mL - 640 pg/mL
Sensitivity	0.1 ng/ml
Intra-assay Precision	In the same lot CV%<10?3 groups of known high, medium, and low concentration samples were evaluated 20 times on the same plate.
Inter-assay Precision	Different lot CV%<15: 3 groups of known high, medium, and low concentration samples were evaluated 20 times on different plates.

ADDITIONAL INFORMATION

Related Product Information for TNF-alpha elisa kit	Principle of the Assay: This ELISA kit applies the two steps quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with mouse TNF-alpha antibody (solid phase antigen), standards or samples are added to the microtiter plate wells, and the microtiter plate undergoes incubation. Add biotin antibody, incubate, wash thoroughly, and then add avidin enzyme. Wells are thoroughly washed to remove all unbound components, and a sandwich complex of solid antigen-antibody enzyme-labeled secondary antibodies is formed on the solid surface of the microplate. Next, Substrate solution A and substrate solution B are added to each well, and it will produce blue materials under HRP catalysis. The enzyme-substrate reaction is terminated by the addition of sulphuric acid and the color change to yellow. Measured spectrophotometrically at a wavelength of 450 nm, the absorbance (OD value) is positively correlated with the concentration of mouse TNF-alpha in the sample. The concentration of TNF-alpha in the samples could be determined by comparing the O.D. of the samples to the standard curve. Intended Uses: This kit is used for detecting the Mouse TNF-alpha concentration of serum, plasma, and cell culture supernatant.
---	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
