IMAGES

WB (Western Blot)

Detection of human Pol kappa by western blot. Samples: Whole cell lysate (10 ug) from HeLa, HEK293T, RKO, Hep-G2, and Jurkat cells prepared using NETN lysis buffer. Antibody: Affinity purified rabbit anti-Pol kappa antibody (AAA211703 lot 2) used for WB at 0.1 ug/ml. Detection: Chemiluminescence with an exposure time of 3 minutes.

IP (Immunoprecipitation)

Detection of human Pol kappa by western blot of immunoprecipitates. Samples: Whole cell lysate (1.0 mg per IP reaction; 20% of IP loaded) from HeLa cells prepared using NETN lysis buffer. Antibodies: Affinity purified rabbit anti-Pol kappa antibody (AAA211703 lot 2) used for IP at 6 ug per reaction. Pol kappa was also immunoprecipitated by a previous lot of this antibody (AAA211703 lot 1) and a second antibody against a different epitope of Pol kappa. For blotting immunoprecipitated Pol kappa, AAA211703 was used at 0.1 ug/ml. Detection: Chemiluminescence with an exposure time of 10 seconds.

ADDITIONAL INFORMATION

Related Product Information for anti-Polkappa antibody	DNA polymerase kappa (Pol kappa) is a DNA polymerase specifically involved in DNA repair. It is critical to translesion synthesis and can bypass DNA damage that would typically arrest high-fidelity DNA synthesis.
